

Blattivit®

Prestarter for piglets

Piglet breeding is the foundation for the subsequent fattening period. Only fast growing and healthy animals can meet the requirements of farmers. Piglets have a particularly high demand for amino acids, vitamins and minerals. During the suckling period and after weaning, additional highly digestible raw materials must

be supplied. Almost only industrial prestarters, milk replacers or special piglet enhancers can fulfil today's requirements. Special acidic combinations support the fodder and gut hygiene. With Blattin® brand products for piglets, you're always on the safe side

Blattivit® *Ferkel- Pre Classic*

- potato protein
- milk constituents
- rolled oats
- soy protein concentrate
- enzymes
- probiotics

premium prestarter (pelleted)

palatable and highly digestible

supports weaker and smaller sucklings

relieves highly fertile sow genetics

Dosage:

Offer fresh twice a day starting on the 5th to 7th day for free uptake.

Sold in units of:
25 kg bag

Blattivit® *Piggystart*

- probiotics
- immunoglobulins
- glucose
- whey powder

premium prestarter (mealy)

stimulates an early fodder uptake in piglets

very palatable and highly digestible

relieves highly fertile sow genetics

Dosage:

Offer twice a day starting on the 4th day for free uptake.

Sold in units of:
25 kg bag

Blattina®

Milk replacer for piglets

Blattina® *Ferkelmilch 35*

- 35 % highly digestible skimmed milk powder
- probiotics
- no plant proteins

fully adequate replacement for sow milk

supports sound gut hygiene

enables higher weight gains in weaker sucklings

relieves the sow during peak lactation

Dosage:
200-250 g per litre of water

Sold in units of:
10 kg bucket

Blattina® *Ferkelbrei*

- dairy products
- lactose

high uptake due to pulpy texture

feeds even the weakest piglets of a litter

more homogeneous piglet growth

Relieves the sow during peak lactation

Dosage:
Mix Blattina Ferkelbrei in a ratio of 1:2 or 1:2.5 with water

Sold in units of:
25 kg bag

Blattisan®

Specialities for piglets

Under certain conditions, such as weaning, transportation, disease, vaccination or fodder changes, the demand for nutrients exceeds the normal requirements. The usual mineral feed and supplements can no longer entirely meet

the demand.

Blattin® offers professional customers competent solutions with their Blattiviko® and Blattisan® brand specialities.

Blattisan® *Albis Akut*

Stops diarrhea in acute cases

- apple pomace, dextrose, algae meal
- electrolytes and vitamins

supply of electrolytes and energy

easy to use

high supply of vitamin C for immune protection

Diarrhea stop!

Dosage:

Feed 25 g Blattisan Albis acute/l drinking water for 1 to 4 days or add with 5% to the weaning feed

Sold in units of:
1,400 g bucket

Blattisan® *Diät*

Electrolyte trough powder supplement during and after diarrhea

- electrolytes
- glucose
- sodium citrate
- bicarbonates

prevents dehydration

supports the cell function

ensures energy supply

counteracts overacidification

easy absorption

Dosage:

50 g per litre of water (30°C)

Sold in units of:
1kg tin, 5kg bucket, 10kg and 25kg bags

Blattisan® Blattiviko®

Specialities for piglets

Blattisan® *Diät liq*

Liquid!

Electrolyte trough supplement during and after diarrhea

- electrolytes
- glucose
- sodium citrate
- bicarbonates

liquid version against dehydration

Supply of electrolytes and energy for cell functions

easy absorption

Dosage:
Mix 40 ml in 1 litre of water (30°C)

Sold in units of:
1 l bottle

Blattiviko® *Plus*

Water-soluble vitamin concentrate

- rapid effect
- high vitamin concentration
- dextrose

support in case of disease

support during periods of stress

healthy animals before every herd vaccination

Dosage:
50 g per boar and day

Sold in units of:
1 kg tin
5 kg bucket
10 kg bag

Blattisan®

Specialities for piglets

Blattisan® *Plantasan*

Supplement for healthy airways

- plant extracts
- ethereal oils
- vitamins E and C

stabilises the lung function

support in case of coughing

boosts immunity

recommended as stabling prophylaxis

Dosage:
25 g per animal and day

Sold in units of:
10 kg, 25 kg bags

Blattisan® *Mykovital*

In case of contamination with mycotoxins

- dextrose
- linseed oil
- fat
- organic trace elements
- beta-carotene
- vitamins E and B
- plant extracts

support in case of mycotoxin contamination

stabilises the metabolism

enhances the natural resilience

vitality and yields are maintained

Dosage:
5 g per tonne of feed (88 % dry substance)

Sold in units of:
25 kg bag

In cases of mycotoxins and mould in feed

Blattin®

Blattisan®*Specialities for piglets***Blattisan® Des-N**

Litter for new-born piglets

*quickly dries out moisture**prevents hypothermia in piglets**reduces the risk of bacterial infections**kind to the skin and pH-neutral**convenient and efficient dosage*

Dosage:

Litter 50-100g (1 handful) per m² twice a week. We recommend repeating the procedure every second day if the stables are very humid.

Sold in units of:
25 kg bag

**Blattisan® SK1**

Acidic mixture

- butyric acid
- formic acid
- benzoic acid

*support in case of salmonella infections**enhances colon hygiene**quick leavening of slop**builds up the intestinal villi*

Dosage:

10 kg per tonne of complete feed (88 % dry substance)

Sold in units of:
25 kg bag

Blattisan®

Specialities for piglets

Blattisan® SK2

Feed acids for piglets with intestinal disorders

- formic acid
- benzoic acid
- lactic acid
- malic acid
- citric acid
- fumaric acid
- highly effective acid capsules

rapi effect

enhances colon hygiene

quick leavening of slop

Dosage:
Add 5 to 20 kg to the complete feed (88 % dry substance)

Sold in units of:
25 kg bag

Blattisan® SK Phyto

Special feed supplement for an increased absorption of nutrients in fattening pigs

- benzoic acid
- ethereal oils

enhances colon hygiene

increased enzyme production in the body

improves the absorption of nutrients

strengthens the immune system

reduces feed costs - increases profit

combines the benefits of ethereal oils and acid

Dosage:
5 kg per tonne of complete fodder (88 % dry substance)

Sold in units of:
25 kg bag
1000 kg container

Blattin®

Blattifluid®

*Specialities for piglets***Blattifluid® Säuremix**

Liquid acidic mixture

- propionic acid
- formic acid
- lactic acid

*quick leavening of slop**Reduces the bacterial load in feed and trough systems**enhances colon hygiene**support in case of salmonella infections*

Dosage:

pigs: 1-2 kg per tonne of feed (88 % dry substance)

pigs: 1 kg per 1.000 l of liquid feed
trough water 1-2kg per 1.000 l depending on contaminationIn case of salmonella: 2 kg per tonne of feed (88 % dry substance) or 1.000l liquid feed/
trough waterSold in units of:
25 kg canister, 200 kg barrel,

Liquid!
